Cable: Available in seamless lengths up to ½ mile

Timatch<sup>®</sup> perfect match connectors

CATV CABLE & CONNECTORS

Putting a good show on the home screens of your subscribers is one part of CATV show business. Having the equipment to back up your programming—with clear, dependable pictures that don't ghost, fade or give up altogether—is another.

Times 30db CATV cable—and instantly-installed matching connectors—delivers award-winning performance to your subscribers' homes year after year. It's the surest way to keep them happy and put profits in your system's picture. Times cable is trouble-free because of the way it's made:

in continuous seamless lengths up to ½ mile. This means fewer splices, fewer trouble points, less maintenance . . . and less labor cost. And because it's seamless, it's water and vaporproof . . . won't stop the signal short of target. All in all, you get improved electrical performance from Times cable and matching Timatch connectors. Long after so-called economy cable has been replaced, Times cable will still be a top performer, even while you're upgrading your system.

To take advantage of this direct way to assure your system's pay-out, contact Times for information on its CATV cable.

Multi-lingual. That's TeleSystems. We're as fluent in Equipment Recommendations as we are in Franchise Procurement. We speak CATV Public Relations, Sales Promotion, Feasibility Research, Engineering and Financing with equal ease. In CATV, nothing sounds like Greek to TeleSystems. That's because we operate systems of our own, build turnkey systems for others, and perform all kinds of services for operators and investors alike. How did we get so fluent? First we learned the mother tongue. Profits.

## Two ways to get there

Short haul or long haul? Whichever way you go, you'll find one of Collins' microwave systems the best way to relay television programming.

Low differential gain, low phase distortion and excellent linearity of Collins' equipment assures you that the sharpness, clarity, definition and color hues will be faithfully maintained for transmissions sent over hundreds or thousands of miles.

Collins 5-watt i-f heterodyne microwave systems provide the capability for best long haul color television performance.

Collins 1-watt remodulating equipments offer economy for short to medium haul routes.

Both systems are available in either 6-gc or 11-gc frequency bands, and are completely transistorized—except for TWT's or transmit klystrons. Both have new advanced packaging techniques for ease of maintenance.

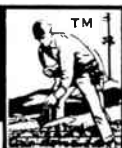

For technical information, call, wire or write Collins Radio Company, Microwave Marketing, Dallas, Texas, Area Code 214, AD 5-9511.

# PARABOLIC BROADBAND ANTENNA

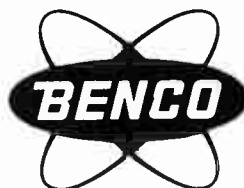

## STARTS WHERE OTHER SOPHISTICATED ANTENNAS LEAVE OFF!

The Benco Parabolic Broadband Antenna utilizes tropospheric scatter for over-horizon TV reception beyond normal distances. Over 13,500 square feet of screen area capture and reflect fringe TV signals into a focal point antenna providing picture qualities impossible with previously known hi-gain antenna arrangements. Its narrow forward selec-

tivity and its high front to back ratio serve ideally to overcome most co-channel and adjacent channel interferences. This ruggedly constructed Parabolic Broadband Antenna is available as a standard kit, including hardware and erection instructions from:

## ENGINEERING . . . . . DEPENDABILITY . . . . . PRODUCTION . . . . . SERVICE

Due to our top design engineers; the complete dependability of our products; our modern production methods; and our old-fashioned custom of "Service-First"; our sales have increased 400% since 1963 . . . . . and we are now expanding into our second plant.

Our record speaks for itself when you consider that we started as a cellar operation only 7 years ago, and didn't even begin our national sales program until 1963.

CRAFTSMAN is grateful to the numerous systems who have contributed to our growth, and whom we have encouraged to a higher profit picture through the use of our products.

Remembering that you, our customer, are the life's blood of our company, we at Craftsman continue to serve you and the CATV industry.

# Why Dresser-Ideco is "Tallest in Towers"

Let's look at the Dresser-Ideco construction record for 1965 alone:

At Tulsa, Okla., (KTUL-TV), 1909 feet. At Little Rock, Ark., (KATV), 2000 feet. At Eau Claire, Wis., (WEAU-TV), 2000 feet. At Ft. Smith, Ark., (KFSA-TV), 1169 feet. At Mason City, Iowa, (KGLO-TV), 1529 feet. At San Juan, P.R., (WAPA-TV), 1094 feet. At Joplin, Mo., (KODE-TV), 999 feet. At Television Hill in Baltimore, Md., Dresser-Ideco "lifted" the 700-foot WBAL-TV, WMAR-TV, WJZ-TV "Candelabra" to 1000 feet (in accordance with a capability "built-in" to the original "Candelabra" tower by Dresser-Ideco some years before).

Concurrently, Dresser-Ideco designed, fabricated and installed: (1) at Bethesda, Md., (Washington, D.C.'s WDCA-TV) the world's first self-supporting (no guy wires) "Candelabra," 809 feet; (2) at other sites, many smaller TV and AM radio antenna towers and an imposing number of special antenna support structures for government and industry.

At year's end, Dresser-Ideco, among other projects, was putting up four towers ranging from 1100 to 1500 feet for Georgia Educational TV.

These are the current facts behind the phrase "tallest in towers"... facts to consider if you are initiating station improvement or a new tower.

## So far, there's only one applicant

It's Lenkurt's 76 TV microwave transmission system.

This is the system that's bringing top-quality color and black & white TV into areas where they used to think something was wrong with their picture if it didn't have snow most of the time.

For instance, take the 76 TV Studio Transmitter installation at station KOLO-TV in Reno, Nevada. Since the 76 is transistorized, the new system operates with practically no maintenance, quite a bonus to KOLO-TV because one of their microwave terminals is located on Freel Peak, where 20 foot snows and 100-200 mile winds are not uncommon.

Another outstanding feature of the 76 system is its versatility. At the University of Kansas Medical Center, a 76 ETV system makes it possible for students to participate in classes being presented at a sister campus, 45 miles away. This is one of the few two-way ETV systems in existence. This system is significant because of the high resolution it provides for remote observation of medical techniques.

And the Columbia Basin Microwave Company is using our microwave to transmit two off-the-air pickups through an extensive 76 network to serve several CATV companies and school districts.

So, whether you're planning a community TV setup, an Educational TV program, or want to join a network, and you want rugged, reliable equipment to help with top-quality color and black & white TV transmission, you'd be doing a smart thing to write us for the resume on our money-saving, solid-state 76 TV microwave system.

# CANADA WIRE **ALUCEL**

**Your assurance of coaxial quality!**

ALUCEL aluminum sheathed polyethylene coaxial cable has been designed and produced since 1961, expressly for all CATV system needs. Over 30,000 miles are in use in U.S.A. and Canada today.

How can you be sure ALUCEL is right for your system? Quality control is Canada Wire's assurance to you. Constant production checks show that on the average, minimum structural return loss at any frequency between 7 and 216 Mc/s is 32 d.b., and "ghosting" is eliminated by close control of impedance.

Are you worried about connector pull-out problems? ALUCEL'S precisely controlled dielectric extrusion diameter, regulated adhesion to center conductor and controlled drawdown of the aluminum sheath through selected dies, absolutely insures properly installed connectors will not pull out.

Make sure that your CATV system is up-to-date equipment—specify ALUCEL by Canada Wire.

# AN OPEN LETTER TO CATV OPERATORS

*from*

FREDERICK W. FORD, *President*  
*National Community Television Assn.*

Dear CATV Operator:

The year 1966 promises to mark a major turning point in the CATV industry. The momentous developments that received widespread national attention in 1965 are certain to be over-shadowed by the events of the current year.

In Congress, at the FCC, and in the courts, problems vital to the industry's and the public interest will occupy the minds of many men. We are hopeful for, and expect, a reasonable resolution of these problems.

It will not be easy—change is never so. It will require a concerted effort by ALL CATV system operators to arrive at our goal: The establishment of a national policy to assure that the people of the United States shall have access to the greatest practicable diversity of television programming, whether by wire or radio.

The membership of the National Community Television Association is united in its determination to obtain the practical accomplishment of their goal.

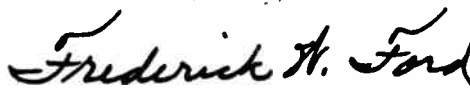

Our cause is just, and we are determined to fight until the correctness of our position is recognized, and CATV becomes integrated into the communications industry and assumes its rightful place in striving for a common objective of the CATV and broadcasting industries—namely, the greatest service to the greatest number of people that our free enterprise system will permit.

We do not desire to win that rightful place through the weakness of the arguments of our opponents, but only through the strength of our own and the correctness of our position.

As a CATV system operator, you have a vital stake in the deliberation of the issues. Through NCTA, your voice can be heard and heeded at the places where your presence must be felt if our efforts are to be successful. If you are not already a member of NCTA, there is no better time than now to join your nearly 800 fellow CATV system operators who are working together for your best interests. We welcome *your* participation.

P.S. For a membership application form and descriptive brochure on the benefits and services offered by NCTA, write today to Membership, National Community Television Association, 535 Transportation Building, Washington, D.C. 20006. Your investment in NCTA is an investment in your own CATV future.

Sincerely,

Frederick W. Ford  
President

the leader in  
Cable Television

## TOTAL SERVICE — TOTAL CATV

Ameco, Inc. with more than \$13 million dollars in assets, has the capability to provide the total products and services required to build, rebuild, or expand CATV systems. Now listed on the American Stock Exchange, Ameco is out-pacing every other CATV manufacturer. Ameco has five buildings with an over-all capacity of 100,000 square feet. Since 1962, Ameco has produced over 78,000 solid-state amplifiers. More than 10,000 Ameco 70 Series amplifiers are in use in CATV systems throughout the U. S. And, 80% of the CATV systems in the United States and Canada rely in whole or in part on Ameco equipment.

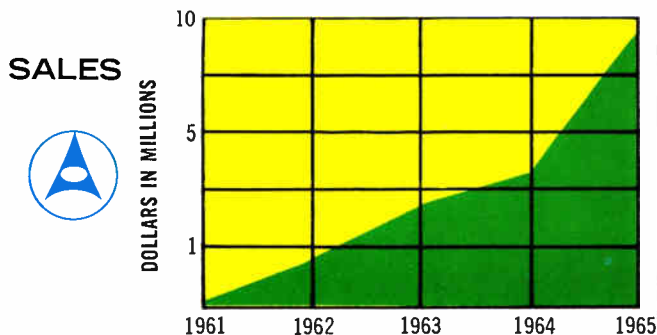

Ameco sales have increased dramatically. In 1961, sales totaled \$500,000. In 1965, sales rose to the \$10,000,000 mark. Currently, sales are running more than \$2,000,000 per month.

Ameco services enable you to provide your customers with the best cable television viewing available in the United States today. Two of Ameco's services are now pacing the industry.

The Ameco Acceptance Corporation offers financing for new system construction and rebuilds. AAC has established an unlimited line of credit and will tailor financing to meet your individual system requirements.

Co-ax Construction Company has built more than 7,500 miles of turnkey plant. This Ameco subsidiary utilizes its own construction personnel and can handle any size construction job throughout the nation.

Ameco has the people, products, resources, and knowledge to serve all your CATV requirements. **When quality counts — count on Ameco!**

WorldRadioHistory

**GROWTH IS A MEASURE OF SUCCESS.** From 1956 to 1965 Ameco's overall plant size was increased from 38,000 square feet to over 100,000 square feet.

**Engineering Research & Development** Engineering is the keystone of any CATV system. Ameco's engineers are experts in all phases of engineering: construction and installation, signal surveys, system layout, head-end alignment. Their goal: the most effective products possible, realistically priced, designed with precision, efficiently produced.

**Financing** Ameco's "custom finance plans" enable you to obtain finances with terms tailored to your particular needs. Headed by Dick Peterson, Ameco's finance subsidiary offers the personnel, experience and backing to assist you in building a new system or rebuilding an old one.

**Construction** Coax Construction Co., newly formed subsidiary of Ameco, Inc., is staffed with experienced CATV construction personnel. CCC offers system owners a complete turnkey package, or, qualified assistance on any construction problem.

**Sales Service** Regional warehouses are located in major cities; 10 contract sales representatives, and 23 CATV sales engineers, are located strategically throughout the U. S. and Canada. This coordinated sales-service program assures you and your customers of consistent, continuous system performance.

**LOOKING AHEAD** We've come a long way in CATV, but the future promises even more, especially in the field of public service. CATV will shine as color TV becomes more readily available. Educational TV will benefit from CATV service. Weather channels will multiply, news and information services will become readily available to subscribers.

Ameco has all the necessary qualifications — plus the vision and ingenuity to anticipate and fulfill the ever growing needs of CATV.

# Top People Read Television Digest

For their reasons, turn to page 249-c

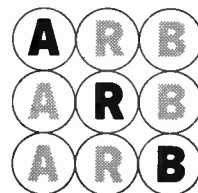

# Isabel Brown turns them down

We have a long list of volunteers eager to become a part of the American Research Bureau's sampling activities. People write to us regularly requesting that they be included in our audience surveys, eager to cast their "vote." But Isabel Brown turns them down.

As Field Staff Director, she knows that good sampling requires using only those people who are *selected* during the due course of ARB's procedures . . . the idea being that everyone in the defined universe is given an equal opportunity for selection. This is the critical criterion. We don't have to ask everybody, but once we do make a selection we are particularly concerned that those people, and those alone, participate.

For those over-eager volunteers, we have to make a friendly policy. *Don't call us, we'll call you . . . maybe.* It just has to be that way to keep ARB audience reports as good as they are.

## Why not go VIKING SOLID STATE?

Viking's all new HIGH LEVEL INLINE MODULAR SOLID STATE AMPLIFIERS have been designed to provide MORE CASCADABILITY, HIGHER GAIN, LOWER NOISE FIGURE and MORE OUTPUT CAPABILITY than any other competitive design... with all silicon RF transistors and rectifiers.

No other Solid State Amplifiers offer so much value at so low a cost. After years of research and development VIKING brings to the CATV industry a complete line of amplifiers that meet the requirements of an ALL-BAND system necessitating the use of fewer amplifiers resulting in trouble free installation and low maintenance costs.

GO VIKING FOR THE FINEST SOLID STATE EQUIPMENT.

VIKING SOLID STATE AMPLIFIERS offer all of these valuable features:

**60 AMPLIFIER CASCADABILITY** — a 12 channel system of more than 60 main line amplifiers in series or better than 1400db of cable can be built for signal-to-noise ratio in excess of 40db.

**LOWEST NOISE FIGURE** — at full gain, 10db maximum — At 10db gain reduction 12db maximum.

**OUTPUT CAPABILITY** — 50dbmv minimum at 57 db crossmodulation, full-tilted.

**BUILT IN AGC** — is an integral part of the amplifier and operates by changing gain after the second stage of amplification with an insignificant change in noise figure in proportion to AGC action.

**BUILT-IN THERMAL EQUALIZER** — the VIKING AGC is designed to tilt the response curve to compensate for change in cable attenuation due to climatic variances, eliminating the need for separate thermal equalizers.

**NO SPECIAL TEST PROBES** — All test points externally available with "F" type fittings.

**PLUG IN PADS** — the mainline AGC amplifier is designed with separate plug-in pads so that, after several amplifiers, each band can be individually readjusted or to permit the amplifier to be used as either a low band only or high band only AGC amplifier.

**BUILT IN DIRECTIONAL COUPLER** — a -10db directional coupler is externally built into the unit to power associated bridger or line extender amplifiers. External test points are provided.

**LIGHTNING PROTECTION** — every Solid State amplifier is protected by special circuitry up to 10,000 volts. The AGC amplifier has a full wave power supply with no D.C. component.

**MODULAR CONSTRUCTION** — the internal unit of the amplifier can be replaced within seconds without disconnecting cable fittings or unsoldering components. When a bridger amplifier is disconnected, the trunk signal and A.C. power is undisturbed. All amplifiers pass AC power through rugged connections whether internal amplifier unit is in place or not. The RF modules may be up-dated when improved transistors become available so that the amplifier will not be out-moded.

**WEATHER AND RADIATION PROOF** — 2 piece die cast and hinged housing requires no additional weather-proof housing or radiation shielding and provides easy accessibility to all controls.

**VERSATILITY** — amplifiers may be messenger mounted from either the side or top of the housing as well as direct pole or crossarm mounted.

**INLINE INSTALLATION** — all amplifiers may be installed directly into the cable line without requiring pole or additional support other than the messenger strand. The need for jumpers and extra connectors are completely eliminated resulting in 22% reduction of material and labor costs.

**FITTINGS** — stocked with special VIKING designed SM412 and SM500 SUPER-MATCHED fittings. Center conductor has full one inch engagement of cable in Super Match connectors which allows for maximum expansion or contraction due to climatic conditions. Available with all other fittings upon request.

Mr. M. D. McGuire and the reliable CAS TRA-217 amplifier.

## Let CAS stop your amplifier problems

More than 250 CAS amplifiers in Abilene, Texas, CATV system operate for 12 months without a single failure. That's over 1,500,000 amplifier hours of trouble-free operation.

**H**ow's that for reliability? CAS performance-proved TRA-217 solid state amplifiers are unaffected by lightning surges, transistor or other circuit failures . . . reduce subscriber downtime and keep component maintenance to a minimum.

### "No Failures"

Listen to what Mr. M. D. McGuire, chief engineer of TV Cable of Abilene, Inc., says:

*"We now have more than 500 CAS TRA-217 amplifiers in our system. Most of them have been in use since*

*November 1964. After all that service we have had no failures. The CAS amplifiers continue to deliver signals with no deterioration and require a minimum of technical attention."*

The TRA-217 amplifier has trunk line capability, yet is priced low enough for use as an extender. It is especially well suited for use in limited cascade (10 or less) or as a high-level extender with practical output of +40 db with at least 6 db reserve.

CAS reliability is available in a wide range of CATV products and services

. . . from temperature compensated solid state equipment to experienced system design and construction.

Write today for information how CAS capabilities can help you build, modernize or extend your CATV system.

# Television Translator Stations

As of March 7, 1966

## Vhf and Uhf Channels

Dagger (†) preceding a listing indicates station(s) are licensed.

Asterisk (\*) preceding a listing indicates construction permit(s).

When a community has a translator licensed and another with a construction permit only, these symbols precede call letters.

Absence of symbols means that an application has been filed, but FCC has not yet taken action.

Channel numbers are contained in call letters:

For example, Ch. 3 is indicated for Clear, Alaska, by K03BE; symbols # # indicate call letters not yet assigned.

Call letters and location of station repeated are in parentheses.

\* The equipment listed herein is considered acceptable for use in the television broadcast service, provided operation is in accordance with the Commission's rules and that the technical specifications as listed herein are not exceeded. "Type acceptance" is required for listing of transmitters and translators. For monitors, "type approval" is required for listing.

In most cases, type acceptance is based on measurements made when the transmitter is used with certain external components specified by the manufacturer. In such cases, the type number listed identifies the assembly, including the transmitter and external components identical to those used for the type acceptance measurements.

<sup>A</sup> Type accepted for monochrome transmission only.

<sup>B</sup> This is a power amplifier only.

<sup>C</sup> This entry shows power ratings at upper extremity of frequency range indicated.

<sup>D</sup> RCA transmitters with suffix "PC" equipped with RCA type TFC-IA exciter.

<sup>E</sup> Visual exciter rated at 10-watts output power and having an output frequency range of 4.5-14 mc.

<sup>F</sup> Power amplifier for use with Adler equipment only.

<sup>G</sup> Translator multiple output power amplifier to be used with VHF translator.

# HURRICANE BETSY FAILS TO SHAKE FORT WORTH TOWER COMPANY INSTALLATION!

"personnel are already on the job salvaging as much of the many miles of plant as possible. The tower, installed by Fort Worth Tower Company remained intact despite 170 mile winds and a tremendous tidal wave which destroyed the chain-link fence at the base, and actually blew the paint off the tower" . . . .

*An on-site inspection report by Jim Davidson, president of DAVCO Electronics Corporation, the firm who is rebuilding the cable television system at Buras, Louisiana. The system was almost completely destroyed by Hurricane Betsy.*

Your Fort Worth Tower installation will probably never have to prove itself in a hurricane but isn't it assuring to know that it could. You can't do better than to specify towers designed, manufactured and erected by FORT WORTH TOWER COMPANY for every communications purpose. For COMPLETE information WRITE — PHONE — WIRE.

# Why Dresser-Ideco is "Tallest in Towers"

Let's look at the Dresser-Ideco construction record for 1965 alone:

At Tulsa, Okla., (KTUL-TV), 1909 feet. At Little Rock, Ark., (KATV), 2000 feet. At Eau Claire, Wis., (WEAU-TV), 2000 feet. At Ft. Smith, Ark., (KFSA-TV), 1169 feet. At Mason City, Iowa, (KGLO-TV), 1529 feet. At San Juan, P.R., (WAPA-TV), 1094 feet. At Joplin, Mo., (KODE-TV), 999 feet. At Television Hill in Baltimore, Md., Dresser-Ideco "lifted" the 700-foot WBAL-TV, WMAR-TV, WJZ-TV "Candelabra" to 1000 feet (in accordance with a capability "built-in" to the original "Candelabra" tower by Dresser-Ideco some years before).

Concurrently, Dresser-Ideco designed, fabricated and installed: (1) at Bethesda, Md., (Washington, D.C.'s WDCA-TV) the world's first self-supporting (no guy wires) "Candelabra," 809 feet; (2) at other sites, many smaller TV and AM radio antenna towers and an imposing number of special antenna support structures for government and industry.

At year's end, Dresser-Ideco, among other projects, was putting up four towers ranging from 1100 to 1500 feet for Georgia Educational TV.

These are the current facts behind the phrase "tallest in towers"...facts to consider if you are initiating station improvement or a new tower.

# 'ENGLISH ELECTRIC' SERVES THE TV INDUSTRY—AND THE VIEWER!

These English Electric camera tubes incorporate an entirely new target material giving an operational life expectancy of at least 3 times that of normal tubes.

#### THE ELCON\* TARGET ACHIEVES:

- Guaranteed life of 750 hours
- Complete lack of image retention—no sticking pictures
- Sensitivity fall-off greatly reduced—sensitivity remains constant for life
- Stability of contrast reproduction—no matching problems
- Immediate switch-on—no warm-up delay.

Experience has proved that operational lives of 3000/5000 hours are obtainable. Another EEV development in ELCON tubes is the complete absence of image-induced microphony. The availability of these new improved EEV Image Orthicons means that the picture will be better than ever.

*\* ELCON is derived from the properties of the new EEV target—namely, EElectronic CONducting as opposed to the familiar ionic conductors normally used.*

# Why should you care about Mrs. Brennan?

Chances are you don't even know Mrs. Brennan. She's rather an everyday housewife. Shops. Scrubs floors. Makes peanut butter sandwiches for three kids. On occasion, she's even been known to stand up and speak her piece at PTA meetings. Mrs. Brennan's an everyday housewife, *but not an ordinary woman*. She accomplishes what she sets out to do with a vital dedication and enthusiasm.

That's what makes her important to ARB . . . and to you.

You see, Mrs. Brennan is an ARB interviewer, one of hundreds in communities all over the country. She's close to her community and its people. She works *in* her community. If you think she makes a mean peanut butter sandwich, you should hear her gain the cooperation of selected sample families and note her pleasant, courteous follow-up calls. She's a real professional.

So you really should care about Mrs. Brennan. And, someday when you are pondering an ARB audience measurement report, remember her. We do. And it sure makes us feel a lot more confident.

# Do yourself a favor—start exporting.

# You'll be doing your country a favor, too.

There's money in exporting. Who knows—it could even double your business.\* How does it help your country? Simple. The more we export, the better we'll be able to reduce our balance-of-payments deficit. For really helpful information on world markets and how to break into them, just pick up the phone and call your local office of the U.S. Dept. of Commerce.

\*It happened to one of America's largest chemical companies. And there are dozens of others—large and small—that have been just as successful abroad. Case histories on request from U.S. Dept. of Commerce, Washington, D.C.

# Why should you care about Mrs. Brennan?

Chances are you don't even know Mrs. Brennan. She's rather an everyday housewife. Shops. Scrubs floors. Makes peanut butter sandwiches for three kids. On occasion, she's even been known to stand up and speak her piece at PTA meetings. Mrs. Brennan's an everyday housewife, *but not an ordinary woman*. She accomplishes what she sets out to do with a vital dedication and enthusiasm.

That's what makes her important to ARB . . . and to you.

You see, Mrs. Brennan is an ARB interviewer, one of hundreds in communities all over the country. She's close to her community and its people. She works *in* her community. If you think she makes a mean peanut butter sandwich, you should hear her gain the cooperation of selected sample families and note her pleasant, courteous follow-up calls. She's a real professional.

So you really should care about Mrs. Brennan. And, someday when you are pondering an ARB audience measurement report, remember her. We do. And it sure makes *us* feel a lot more confident.

# Do yourself a favor—start exporting.

## You'll be doing your country a favor, too.

There's money in exporting. Who knows—it could even double your business.\* How does it help your country? Simple. The more we export, the better we'll be able to reduce our balance-of-payments deficit. For really helpful information on world markets and how to break into them, just pick up the phone and call your local office of the U.S. Dept. of Commerce.

\*It happened to one of America's largest chemical companies. And there are dozens of others—large and small—that have been just as successful abroad. Case histories on request from U.S. Dept. of Commerce, Washington, D.C.

Published as a public service in  
co-operation with The Advertising Council  
and the Department of Commerce.

# Why should you care about Mrs. Brennan?

Chances are you don't even know Mrs. Brennan. She's rather an everyday housewife. Shops. Scrubs floors. Makes peanut butter sandwiches for three kids. On occasion, she's even been known to stand up and speak her piece at PTA meetings. Mrs. Brennan's an everyday housewife, *but not an ordinary woman*. She accomplishes what she sets out to do with a vital dedication and enthusiasm.

That's what makes her important to ARB . . . and to you.

You see, Mrs. Brennan is an ARB interviewer, one of hundreds in communities all over the country. She's close to her community and its people. She works *in* her community. If you think she makes a mean peanut butter sandwich, you should hear her gain the cooperation of selected sample families and note her pleasant, courteous follow-up calls. She's a real professional.

So you really should care about Mrs. Brennan. And, someday when you are pondering an ARB audience measurement report, remember her. We do. And it sure makes us feel a lot more confident.

## ANTENNAS • RUGGEDIZED VHF YAGIS – UP TO STAY!

Engineered and fabricated to withstand the severest climatic conditions . . . high winds, corrosive atmospheres, and heavy ice loadings . . . Jerrold-TACO ruggedized yagis are a CATV industry standard for long-lived trouble-free operation.

### Electrical Features

Unique internal balun which confines unequal currents (caused by balanced to unbalanced transformation) to the inside of the element. This results in more symmetrical patterns and a greater degree of frequency independence than are possible with other external matching devices. Jerrold-TACO ruggedized yagis provide the exceptionally high front-to-back ratios, high gain, flat response, and excellent impedance match across their respective bandpasses—all vital for proper color TV performance. These antennas are supplied with a 50-ohm coaxial output fitting. For feeding 75-ohm equipment a Y-TR series transformer is required.

### 5 ELEMENT YAGI ANTENNAS • Channels 2-13 and FM

**Y-51 Series.** Designed for single-channel application in the VHF lowband (ch. 2-6), each model features flat response and sharp drop off outside the desired channel. This produces excellent interference rejection and black-and-white or color reproduction of exceptional quality. Three additional models supply complete FM coverage. Construction features: 1 1/4" square crossarm; 5/8" diameter elements with 3/4" reinforcing sleeves. Prices: Y-51-2, 3, and 4 \$95.00; Y-51-5 \$90.00; Y-51-6 \$85.00. Add \$8.00 for special painting.

**Y-53 Series.** Particularly suited to broadband systems installations, these models are offered for multi-channel applications. Y-53-70—Channels 2-6; Y-53-185—Channels 7-13; Y-53-220—Channels 10-13. Same basic construction as the Y-51 Series. Prices: Y-53-70 \$110.00, Y-53-185 and Y-53-220 \$80.00. Add \$6.00 for special painting.

**Y-54 Extra-Heavy Duty Series.** Even more rugged construction to resist exceptionally severe environmental conditions of wind and ice. The five models offered cover Channels 2 through 6. Since Channel 2 and 3 antennas are quite large, it is good practice to use this heavy duty Y-54 Series for these channels . . . Crossarms are 2" square; antenna elements 3/4" diameter with 7/8" reinforcing sleeves. Prices: Y-54-2, 3, and 4 \$150.00; Y-54-5 and 6 \$145.00. Add \$8.00 for special painting.

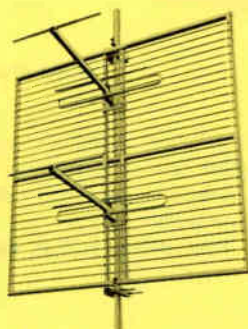

### 8 and 10 ELEMENT YAGI ANTENNAS • Channels 2-13 and FM

**Y-81 Series.** Two models designed to cover Channels 2 and 3. Use of eight elements in this frequency range reduces crossarm length and provides an extra margin of safety under adverse weather conditions. Crossarms are 1 1/4" square; antenna elements are 5/8" with 3/4" diameter reinforcing sleeves. Prices: Y-81-2 and Y-81-3 \$155.00. Add \$9.00 for special painting.

**Y-101 Series.** Six 10-element models to cover the rest of the low band (Channels 4, 5, 6 and FM). Construction features are similar to the Y-81 Series. Prices: Y-101-4 \$160.00; Y-101-5 \$145.00; Y-101-6 \$140.00; Y-101-FM and Y-101-C \$140.00; Y-101-D \$135.00. Add \$10.50 for special painting.

**Y-103 Series.** Specifically designed to cover the high band Channels 7 to 13. These 10-element antennas are available in seven models to cover each channel, plus an additional broadband model for Channels 7 through 13. Mechanical construction uses a 1 1/4" crossarm with 1/2" diameter elements and 5/8" diameter reinforcing sleeves. Prices: Y-103-7, 8 \$78.00; Y-103-9 \$77.00; Y-103-10, 11 \$76.00; Y-103-12, 13 \$75.00; Y-103-(7-13) \$80.00. Add \$8.00 for special painting.

**Y-104 Extra-Heavy Duty Series.** This twin-driven, heavily-ruggedized series is designed to cover Channels 2 to 6 in five models. Massive 2" square crossarm construction successfully resists the fiercest onslaughts of wind, water and ice. Flat across-the-channel response produces sharp black & white or color pictures. 2" square crossarms are employed with 3/4" diameter elements and 7/8" reinforcing sleeves. Prices: Y-104-2 \$250.00; Y-104-3 \$245.00; Y-104-4 \$240.00; Y-104-5 \$240.00; Y-104-6 \$225.00. Prices slightly more for special painting.

### SCREEN REFLECTOR YAGI ANTENNAS Channels 7 through 13

Models SY-41 and SY-42 offer an effective means of eliminating problems associated with co-channel, adjacent channel, or man-made interference. High gain (up to 13 db for an SY-42) and exceptional front-to-back ratios offer excellent reception on all high band channels. Antenna design provides single tower leg mounting, with angular adjust-

ment. SY-41 Series consists of a single 4-element yagi mounted to a screen reflector; SY-42 Series have two 4-element yagis complete with combining lines for a single coaxial output. Prices for all SY-41 models, \$135.00. Add \$7.50 for special painting. SY-42 models are \$250.00 each. Add \$11.00 for special painting.

## AMPLIFIERS • MAIN TRUNK • VHF BAND (54-216 mc) SOLID-STATE ★ STARLINE UNITIZED MAIN TRUNK STATIONS ★

*The new CATV industry standard for distribution systems*

Each of the five Starline unitized main-trunk stations (Models SA-1 thru 5) is cable-powered and provides for a specific electronic function. Each station comprises three elements (a basic housing, one of two connector chassis types, and one of five station plug-in units), integrated into one functional package. The basic station housing comprises a cast-aluminum body and a hinged cover. A double gasket between the body and hinged cover provides an air-tight, radiation-proof seal when the cover is closed. The housing is designed to accept VSF-type fittings. Apart from trunk line input and output apertures, the housing has four feeder-line exits for use at bridging locations, with plugs provided for unused apertures. In addition, the housing has three

apertures, sealed with wire-secured plugs, to give access while the housing is closed to trunk input and output, and bridging test fittings. One of two connector chassis types is integrated with each basic housing. One of these types is used with all unitized stations serving feeder lines (Models SA-1, SA-2, and SA-5). The other is used with those stations not serving feeder lines (Models SA-3 and SA-4). Starline main-trunk amplifiers in stations SA-1, 2, 3, and 4 feature an output capability of 48 dbmv per channel for twelve channels, a minimum gain of 26 db, a response flatness of  $\pm 0.25$  db, hum modulation down 60 db, and a maximum noise figure at full gain of 8 db at ch. 2 and 11 db at ch. 13. Manual gain and tilt controls as well as switchable fixed pads are provided.

### CASCADABILITY

Fifty main-trunk Starline amplifiers can be cascaded in accordance with Jerrold specifications with cross-mod at the last amplifier down 57 db and signal-to-noise ratio of 40 db. These real-number specifications insure picture/sound quality.

## AGC UNITS

For solid-state TML-line

The power bridging circuit is capable of passing ac and dc for powering bridging amplifiers Models

TAGC-213

TBA-1 and TBA-2 and line extender amplifiers Model TLE-1. A built-in regulated power supply transforms the 20-30 vac input to -17 volts dc for operating the solid-state circuitry. The unit is fully shielded in a metal housing and shipped with mounting brackets for installation in 19" relay racks. Normal system requirements are for one TAGC-213 at every third amplifier location, preferably at the master power supply location.

# Is Agnes Ehrlich different because she said "No"?

The cooperation of selected samples is one of the most critical areas of good research. That's why we at the American Research Bureau put special emphasis on selecting and training interviewers who can talk friendly and honestly to people like Agnes Ehrlich about the importance of participating in our audience surveys. But some of them still tell us no.

Although 619,700 families *did* participate in ARB diary surveys last year, we know that gaining complete and accurate cooperation is an impossible objective. We know it, but we don't write it off. Rather, ARB researchers are constantly at work attempting to identify the effects of non-cooperation. After all, it's important to us, and to you, to know if Agnes Ehrlich is that much different than people who say "yes" and how she's different.

This type of diligence has paid off, and will continue to pay off in better audience research reports . . . the kind you just naturally expect from ARB.

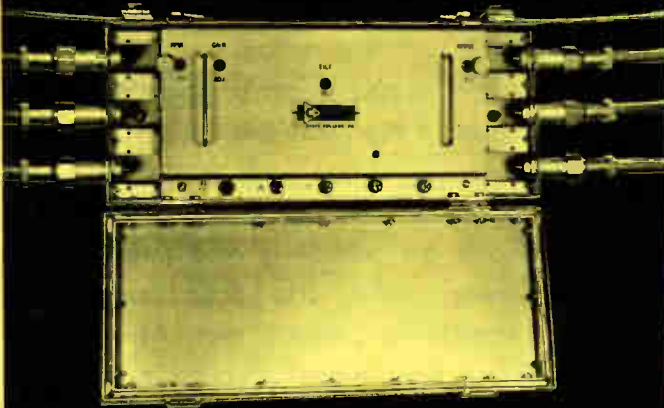

# NOVACOR SOLID-STATE AMPLIFIERS

## A GREAT BREAKTHROUGH IN CATV AMPLIFIERS

BRIDGING AMPLIFIERS

### BRIDGING AMPLIFIERS

NOVACOR Bridgers are modular in design, incorporate new circuitry, and supply 10 db more output than any other CATV amplifiers. The case, with connectors and cables attached, can become a permanent part of the plant, with the electronic chassis unplugging. NOVACOR Bridgers, available in 12 different models, feature direct feed and directional coupler feed configurations. The direct feed configuration is designed to feed from a "bridger out" of the Trunk Amplifiers, an external splitter or directional coupler. The coupler feed is designed for insertion in the trunk without external coupler or splitters.

LINE EXTENDERS

### LINE EXTENDERS

NOVACOR All Band Line Extender Amplifiers utilize solid state circuit design for high output-low noise capabilities. Equipped with both fixed and variable attenuation for flexibility of system design, these line extenders are designed to be cable-powered with power feed thru or power "link" disconnect for feeding either end. Housed in a water tight, RF gasketed case, the NOVACOR Extenders are available with AMP connector arrangements for either messenger or pedestal mounting.

TAP UNITS

### TAP UNITS

NOVACOR Tap Units, a hybrid design for flatest response, are housed in epoxy sealed, aluminum cases, and come with pedestal mountings (TU) or messenger mountings (TM). These units feature true impedance match on service drops, and are marked with reflective numbers for ease of locating at night, db loss of tap and input direction.

# NOVACOR . . . a breakthrough in CATV amplifiers

## TRUNK AMPLIFIERS

NOVACOR Trunk Amplifiers supply 10 db more output than any other CATV amplifiers. They are available in three basic models, which differ in gain and tilt capability to provide optimum amplifier spacing in systems of varying length and customer density. The amplifier is housed in an aluminum, weathertight, RF gasketed case, and is available with messenger mount or can be attached to the cross arm.

## SPLITTERS

All NOVACOR Splitters are weather sealed with epoxy for long lasting, trouble-free performance. They feature a universal mounting for messenger or surface by use of a throw-away stud and messenger clamp assembly. AMP connectors are standard, while we can supply M or U, or other connectors on special order. The NOVACOR indoor splitters are supplied with F connectors and no power bypass.

## TEST PROBE

A NOVACOR Test Probe, TP-30, is supplied with each amplifier. It is designed with 30 db of attenuation  $\pm 1$  db with 3' of RG-59U cable. It can be utilized for measurements either at the input or output test points. The test probe is clipped to the inside of the case cover of the amplifier with a flexible retaining cable to eliminate loss.

## POWER SUPPLY

The PS-30 Power Supply is housed in a weather-proof aluminum case which can be mounted to the cross arm. Power feed and distribution is made through the connectors on the bottom of the case. Accessibility to the supply unit is made easy and convenient through a sliding front panel. The supply unit may be removed without detaching the case from its mounting.

COLOR TV TAKES A GIANT LEAP FORWARD WITH THE REVOLUTIONARY NEW...

# Polychrome Camera

Sarkes Tarzian, Inc. brought a fresh outlook to the problem of color television. We were free to explore all possibilities. We had no commitment—economical or philosophical—to an existing system, with its inherent faults.

We had no hesitation to innovate, where innovation was called for. Likewise, where we found a proven concept, we adopted it.

Results? The revolutionary, full-color Polychrome Camera system—the only color system offering a choice of tubes.

Here is color television previously unknown. Here is color performance to still the remaining skeptics. Here is rare purity of color . . . rigid stability . . . delicate detail.

And while our engineers were at it, they designed out heaviness and awkward appearance—giving the Polychrome Camera a trim, eye-pleasing silhouette in a unique magnesium housing. Like its monochrome predecessors, Tarzian's Polychrome Camera systems feature 100% transistorized circuitry.

The first Polychrome Camera systems are scheduled for June delivery.
